Ergopods®

The break-through solution for business on the move

Ergopods offer a new and innovative alternative to traditional panel and desk based workstation systems.

They are economical, functional and stylish, designed to provide break-through levels of flexibility, essential for today's business on the move.

Ease of Layout Changes

Layout changes can be achieved quickly and simply as each Ergopod is an individual stand-alone unit. Pods are moved as a single piece and repositioned without affecting adjoining units.

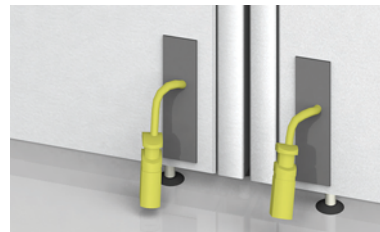

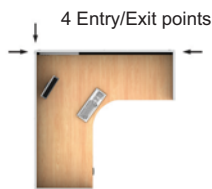

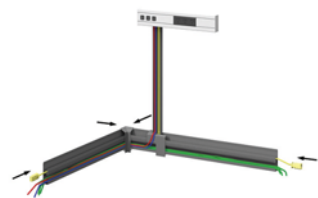

Soft wired power connection leads

Complete Cable Management

Power is deivered via a modular soft wiring system consisting of outlet modules plugged together by means of flexible connecting leads. Each pod is fitted with it's own set of leads and as layout changes are required they are simply unplugged and replugged after the changes have been made. It is the safe, convenient and flexible means of providing power to a potentially ever changing area.
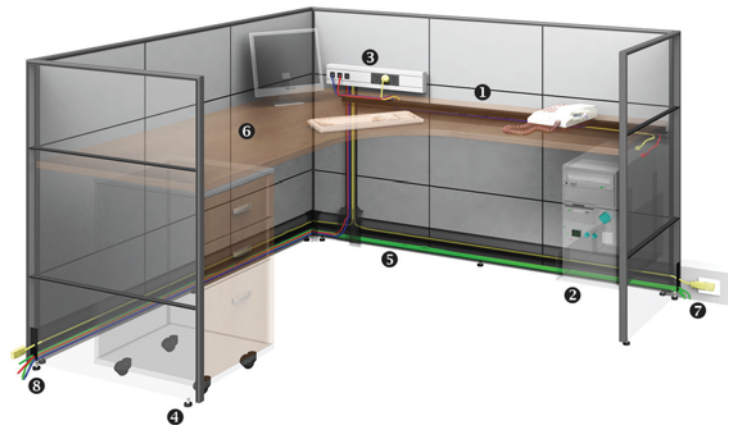

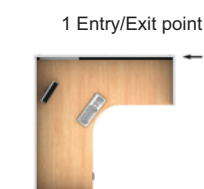

Cable Management Options

Fully Ducted (EDF)

4 Entry/Exit points

Spine Ducted (EDS)

2 Entry/Exit points
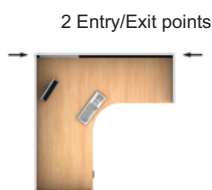

Single Pod Cable Management (EDI)

1 Entry/Exit point

Ergopod Features

❶ Excess Cable Tray
❷ Optional CPU Holder
❸ 3 or 6 Outlet Services Module
❹ Adjustable Feet
❺ Fully Segregated Ducting
❻ Single Piece Work Surface
❼ Exit/Entry point
❽ Exit/Entry point

Cables are routed through large capacity 2 channel ducts with complete segregation between power and voice/data cables. Ducts can be accessed from powerpoles, wall or floor connections.

Service outlets are positioned at convenient desktop height where a recessed cable tray located along the rear of the work surface provides a path and storage for excess appliance leads. This ensures leads can be neatly stored without intruding onto the work surface.
